Dear Hiring Manager,

I am excited to apply for the Business Intelligence Analyst, Dental Informatics opportunity. With training in biostatistics and health data science, along with hands-on experience in R, Python, Shiny, QGIS, and statistical modeling, I bring a strong foundation in building reliable analytics tools, supporting reporting workflows, and turning complex data into practical insights for operational and research teams.

In my role as a Data Science Energy Transition Intern at the University of Houston, I develop data workflows and interactive tools that improve ingestion, cleaning, and interpretation. Most notably, I built an R Shiny application that streamlined variable handling and reduced manual effort in analysis tasks. I also created geospatial visualizations in QGIS and applied clustering and statistical methods to identify patterns across populations and regions. These experiences strengthened my ability to build intuitive dashboards, standardize data handling, and communicate findings clearly to both technical and nontechnical audiences.

My background also aligns well with the reporting, validation, and coordination responsibilities of this role. At Amazon, I prepared shift-close reports, tracked performance metrics, and provided concise updates to leadership on trends, bottlenecks, and operational changes. As a Graduate Research Assistant at the University of Missouri Kansas City, I supported protocol development, performed large-scale data collection, and contributed to analysis and dissemination of results. Across these roles, I learned the importance of accurate documentation, timely reporting, validation, and maintaining records that can be trusted and reviewed by others.

I am particularly drawn to this opportunity because it combines dashboard development, data quality, statistical analysis, and cross-functional collaboration. I would welcome the chance to help define measures, improve reporting processes, support data integrity, and translate data into concise, actionable insights for clinical, operational, and executive stakeholders. I am also eager to contribute to reproducible, well-documented analytical work that supports dependable decision-making.

Thank you for your time and consideration. I would appreciate the opportunity to discuss how my background in analytics, reporting, and workflow development can support your team’s goals.

Sincerely,
Tingwei Adeck
