Dear Hiring Manager,

I am excited to apply for the Research Data Analyst position supporting the Center's AO program. With experience in R, Python, Shiny, QGIS, statistical modeling, and reproducible data workflows, I offer a strong foundation in analysis, data management, reporting, and clear communication across technical and nontechnical audiences.

In my data science internship at the University of Houston, I developed an R Shiny application for data ingestion and variable type handling, improving workflow efficiency and supporting more consistent analysis. I also built geospatial visualizations in QGIS to map patterns across regions, experience that aligns well with analyzing trends, disparities, and geographic variation. In addition, my work has required careful attention to data quality, documentation, and repeatability—skills that are essential for maintaining reliable dashboards, data tools, and research outputs.

Previously at Amazon, I prepared shift-close reports for upper management, tracked operational metrics, and used those results to identify bottlenecks and improve performance. That experience strengthened my ability to work within reporting deadlines, reconcile results to source information, and communicate concise findings to leadership. As a graduate research assistant at the University of Missouri Kansas City, I supported data collection, analysis, and dissemination of results to principal investigators and peers, further developing my skills in research communication, validation, and program support.

I would welcome the opportunity to contribute my analytical judgment, technical skills, and commitment to accurate reporting to your team. Thank you for your time and consideration. I look forward to the opportunity to discuss how my background can support your analysis, data sharing, communication, and data management needs.

Sincerely,
Tingwei Adeck
