Dear Hiring Manager,

I am writing to express my strong interest in the Data Analyst position. With a background in R, Python, statistical modeling, geospatial analysis, Shiny, and reproducible data workflows, I offer a strong foundation for building reliable analytics products, validating data, and communicating findings clearly to technical and nontechnical audiences.

In my recent data science internship with the University of Houston, I developed an R Shiny application for data ingestion and variable type handling, helping streamline analysis workflows and reduce manual effort. I also built geospatial visualizations in QGIS to map patterns across regions, experience that aligns well with analyzing trends, disparities, and geographic variation. In addition, my work required careful attention to data structure, quality control, and reproducibility, which are essential for maintaining accurate dashboards, reports, and analysis-ready datasets.

Previously, at Amazon, I prepared shift-close reports for upper management, tracked operational metrics, and used those results to identify bottlenecks and improve performance. That experience strengthened my ability to work within reporting timelines, reconcile results to source information, and present concise insights to leadership in a fast-paced environment. As a graduate research assistant, I also supported data collection, analysis, and dissemination of findings to principal investigators and peers, which reinforced disciplined documentation and clear communication.

I would welcome the opportunity to bring my analytical judgment, technical skills, and commitment to accurate reporting to your team. Thank you for your time and consideration. I look forward to the opportunity to discuss how my background can support your data analysis and reporting needs.

Sincerely,
Tingwei Adeck
