Dear Hiring Manager,

I am excited to apply for the Research Professional II position with the Department of Family Medicine and Community Health's Program in Health Disparities Research. With a background in biostatistics, data science, and research support, I offer a strong combination of technical analysis skills, project coordination experience, and a genuine commitment to equity-focused, community-engaged research.

In my role as a Data Science Energy Transition Intern at the University of Houston, I have developed tools and workflows that improve data ingestion, cleaning, and interpretation, including an R Shiny application that streamlined variable handling and supported more efficient analysis. I have also built geospatial visualizations in QGIS and used statistical modeling and machine learning to identify patterns across populations and regions. These experiences have strengthened my ability to manage data carefully, maintain reproducible workflows, and communicate findings clearly to both technical and nontechnical audiences.

Previously, as a Graduate Research Assistant at the University of Missouri Kansas City, I supported research protocols, conducted literature-based preparation, performed large-scale data collection activities, and contributed to analysis and dissemination of results to principal investigators and peers. That experience taught me the importance of accurate documentation, thoughtful coordination, and responsiveness when supporting multiple research activities at once. In addition, my time at Amazon required me to prepare shift-close reports, track operational metrics, and communicate concise updates to leadership, which further developed my ability to work within deadlines and maintain reliable records.

I would welcome the opportunity to bring my analytical skills, organizational strength, and collaborative mindset to your team. I am especially drawn to the chance to support research that advances health equity, improves population health outcomes, and contributes to meaningful work with clinical and community partners. Thank you for your time and consideration. I would be grateful for the opportunity to discuss how my background can support your research projects, reporting needs, and team goals.

Sincerely,
Tingwei Adeck
